

## WCC 310 / 320 STANDARD UL UL MotorController

Natural  
ventilation

Rated voltage

MotorLink®

KNX product

UL certification  
– Controls

### Application

- for daily comfort ventilation
- to be used with  $\pm 24V$  standard window actuators and window actuators with MotorLink®
- 4 or 8 motor lines
- 10A or 20A
- With or without KNX

MotorController for the control of  $\pm 24V$  DC standard actuators and actuators with MotorLink® for daily comfort ventilation. It can also control espagnolette/locking actuators.

The MotorController is used for control of 4 or 8 individual motor lines. The number of actuators which can be connected on each motor line depends on the type of actuator – see the table “Max numbers of actuators per motor line and MotorController” for type and number.

### Versions

The MotorController is supplied in 4 variants:

With 10A:

- WCC 310 S 0410 U1: 10A, 4 motor lines, 10 inputs
- WCC 310 S 0410 KNX U1: 10A, 4 motor lines, 10 KNX-inputs

With 20A:

- WCC 320 S 0810 U1: 20A, 8 motor lines, 10 inputs
- WCC 320 S 0810 KNX U1: 20A, 8 motor lines, 10 KNX-inputs

In the MotorController each motor line can have a max load of 4A. The total max current consumption of all motor lines must not exceed 10A / 20A.

The MotorController is also supplied as a PLUS version where the configuration is done on the build in touchscreen – please see the separate product sheet for further information.

### Description

The MotorController controls (opens/closes) the window actuators based on the signals from the connected components e.g. keypads, room sensor, weather sensor and BUS commands.

We recommend keypads are used in conjunction with ventilation automation to allow local manual user override.

### Communication

The communication between the MotorController and each window actuator is done via a 2 or 3 wire cable this depends, if the actuator has MotorLink® or not.

#### Actuators without MotorLink®

The communication is controlled via a 2 wire cable.

The positioning of the windows is based on time control with a limited precision.

#### Actuators with MotorLink®

The communication is controlled digitally via MotorLink® in a 3-core (power and communication wire).

The position of the window is controlled with millimetre accuracy. This is done via the position feedback from the actuators to the MotorController. Via this communication the system continuously registers the extent of the window opening.

The MotorController immediately reports if a malfunction occurs on one of the motor lines.

## Actuator speeds

This MotorController gives the possibility of up to three window actuator speeds depending on the type of actuator connected:

- $\pm 24V$  DC standard actuator: 1 speed (type B)
- MotorLink<sup>®</sup> actuator: 1 speed (type B)
- MotorLink<sup>®</sup> actuator and bus communication, KNX version: 3 speeds (type A / B / C)

### The different speeds

A: Slow and almost soundless chain drive when operated automatically

B: Faster and audible when manually operated by comfort ventilation

C: 100% chain drive when operated by security functions

## Common input

The actuators can be controlled via four common inputs. All switch contacts must be potential free.

When connecting sensors the auxiliary power from the built-in 24V DC 0.23A power supply can be used.

### Option 1

Common CLOSE ALL/safety (rain) function

Actuator speed: B.

### Option 2

Self-hold function on all actuator groups.

Switch closed = self-hold.

### Option 3

Common "OPEN" function for all actuator groups.

No self-hold.

Actuator speed: B.

### Option 4

Common "CLOSE" function for all actuator groups.

No self-hold.

Actuator speed: B.

## MotorController with KNX

The MotorController is integrated into KNX projects using the relevant application. In the application there are a number of communication objects and parameters, which help ensure a flexible integration with other KNX products and control units.

For further information on available objects see "KNX Application Program Description" on our web site [www.windowmaster.com](http://www.windowmaster.com).

### Specifications

- 4 motor lines (comfort ventilation groups) up to 10A or 8 motor lines (comfort ventilation groups) up to 20A
- max. 4A/motor line
- supplied with or without KNX
- one comfort input "Close all"
- max. output voltage 27.6VDC @120VAC
- simple and fast installation

Actuator and power supply cables are quickly and easily connected to the MotorController. The cable access can be made from the top or from underneath the MotorController, which can be mounted vertically or horizontally on the wall.

**Example 1: WCC 310 S 0410 with wind / rain sensor**

In each room actuators with MotorLink® have been connected as well as individual keypads for individual operation of the windows.

A wind/rain sensor is mounted on the roof.

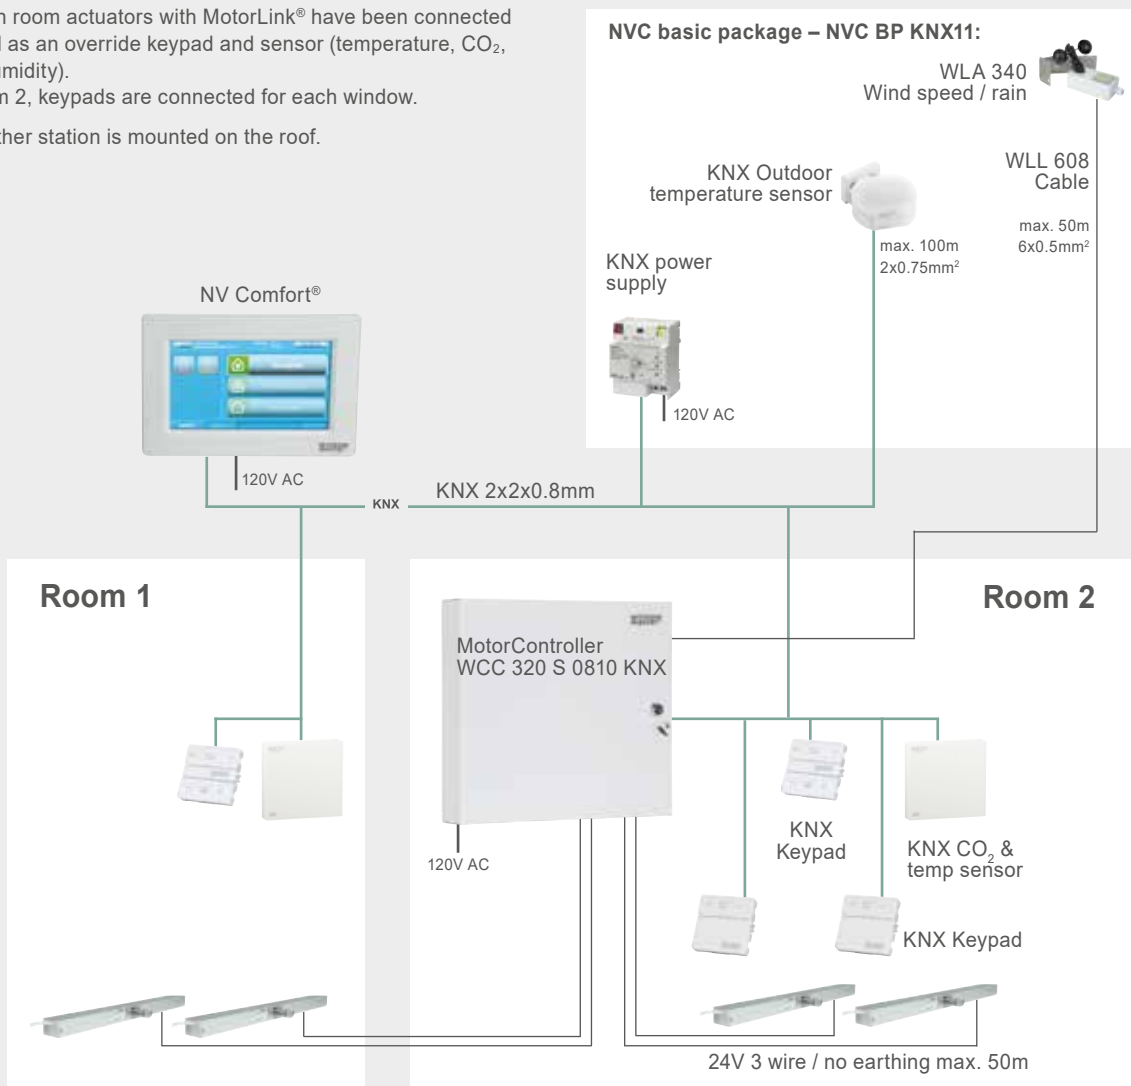

**Example 2: WCC 320 S 0810 KNX connected to the controller NV Comfort®**

In each room actuators with MotorLink® have been connected as well as an override keypad and sensor (temperature, CO<sub>2</sub>, and humidity).

In room 2, keypads are connected for each window.

A weather station is mounted on the roof.

Technical specifications							
Output current	WCC 310: 10A / WCC 320: 20A						
Motor lines	4 or 8 motor lines A line can be either a $\pm 24V$ standard motor line or a MotorLink <sup>®</sup> motor line.

## Max numbers of actuators per motor line and MotorController

The table shows the maximum number of actuators, which can be connected per motor line and MotorController depending on the type of actuator ( $\pm 24V$  standard or MotorLink<sup>®</sup> actuator) and MotorController.

**Notice:** For actuators with MotorLink<sup>®</sup> always max. 4 actuators per motor line. The total power consumption of all the connected actuators must not exceed 10A for WCC 310 and 20A for WCC 320.

WMB 811/812 **	4	2	10	8	20	16

\* Do not exceed the total power consumption of the motor line

\*\* When having two locking actuators on one motor line use: 1 x WMB 811 and 1 x WMB 812

# WCC 310 / 320 STANDARD UL

## UL MotorController

### MotorLink® combinations: Actuator variants on one MotorLink® motor line

- When connecting window actuators one should pay attention to:
  - The max current load of the MotorControllers is 4A per motor line. The simultaneously max current consumption of all motor lines must not exceed 10A on a WCC 310 and 20A on a WCC 320. Actuators with MotorLink®: max 4 actuators per motor line.
  - The cable length and cross section: max voltage drop 2V in the cable, however max distance between the MotorController and the window actuators is 50m
- Aside from window actuators; espagnolette actuators type WMB 811 / 812 (one single or two double actuators) can be connected to the window. When connecting an espagnolette actuator each window must have its own motor line.

Variants	Number of motor lines	Number of inputs	Item no.
MotorController 10A	4 motor lines each 3.15A (in total max. 10A)	10 input	WCC 310 S 0410 U1
MotorController 10A	4 motor lines each 3.15A (in total max. 10A)	10 KNX input	WCC 310 S 0410 KNX U1
MotorController 20A	8 motor lines each 3.15A (in total max. 20A)	10 input	WCC 320 S 0810 U1
MotorController 20A	8 motor lines each 3.15A (in total max. 20A)	10 KNX input	WCC 320 S 0810 KNX U1
